Yasar M

Java Full Stack Developer(Entry Level)

Coimbatore, Tamil Nadu | +91 9087023639 | yasarm8675@gmail.com | https://www.linkedin.com/in/yasar-9087023639-m | https://github.com/yasar-my | https://yasar-m-portfolio.vercel.app

Availability: Immediate Joiner

SUMMARY

Java Full Stack Developer looking for backend/full-stack roles,with skills in Java, Spring Boot, React.js, and MySQL. Built Feast& Fete,a full-stack catering booking platform using microservices,JWT authentication, and Razorpay payments, achieving a 100% pass rate across 8 REST API endpoints in testing. Comfortable with REST API design, database design, and backend architecture, with experience in CI/CD automation and writing secure, well-structured code.

Technical Skills

Languages: Java (Core & Advanced), JavaScript,SQL, HTML5/CSS3
Frameworks: Spring Boot, Spring Security, Spring Data JPA, Hibernate, React.js, Node.js, Express.js
Databases: MySQL (Schema Design, CRUD, Joins)
API & Authentication: REST APIs, JWT Authentication, Role-Based Access Control (RBAC), Middleware
Testing: Postman (API Testing)
Tools: Git, GitHub, Postman, Maven, VS Code
Core Concepts: Java Multi-threading, Task Management, Synchronization, Exception Handling

Soft Skills

Problem-Solving: Strong analytical and logical approach to breaking down complex requirements.
Communication : Clearly documents and explains technical decisions to peers and stakeholders.
Troubleshooting: Efficient in identifying, debugging, and resolving technical issues across the stack.

Experience

Reno Infomatics Pvt Ltd | ***Full Stack Developer Intern*** Sept 2026 – Present

Technologies: Node.js, Express.js, Angular, MySQL

- Developed responsive and reusable web application components using Angular and TypeScript, focusing on structured UI development and maintainable frontend code.
- Designed and developed RESTful APIs using Node.js and Express.js to implement backend functionality, handle HTTP requests, and enable seamless communication between frontend and backend services.
- Integrated Angular applications with backend REST APIs and implemented MySQL database operations, including CRUD functionality, SQL queries, and efficient data retrieval.
- Performed API testing and debugging using Postman, resolved frontend-backend integration issues, and used Git for version control to maintain code quality and support application development..

Projects

Feast and Fete: Full-Stack Event Catering Platform | *Web Full Stack Development* March – May 2026

- Enabled independent scalability and fault isolation by architecting 3 decoupled microservices (Auth, Profile, Booking) behind a single API Gateway, using Java, Spring Boot, React.js, and MySQL.
- Improved session security and reduced forced re-logins by implementing JWT access + refresh token authentication with BCrypt password encryption and protected route validation.
- Automated regression testing by integrating a GitHub Actions CI/CD pipeline to run the Maven test suite on every push, catching build/test failures before merge.
- Reduced entity-exposure risk by adopting a DTO-based layered architecture (Controller → Service → Repository) with custom exception handling.
- Validated system reliability by executing a 9-case test matrix (registration, login, JWT validation, CRUD, admin operations) via Postman, achieving a 100% pass rate across 8 REST API endpoints.
- Enabled real-time, secure payments by integrating Razorpay gateway with live status tracking and Cloudinary-based image handling.
- Tech Stack: Java, Spring Boot, Microservices, Spring Security, JWT, React.js, MySQL, Razorpay, REST APIs.
